

Max marks: 10

Last date for demo: March 31st.

Build a microprocessor using Logisim which can execute the code given at the end.
Demonstrate the MCU running as a team. The team will be the same as the lab teams.
Both students of a team will be given the same marks.

I will change the contents of array a[] for each team during the demo. Students should be able to show the array location.

Code:

```
int a[10]={ 0,1,2,3,4,5,6,7,8,9 };  
int i=0, j=0;
```

```
Void main()  
{  
    while(1)  
    {  
        j = a[0];  
        for(i=0;i<9;i++)  
            a[i] = a[i+1];  
  
        a[9] = a[0];  
    }  
}
```
